

PRODUCT INTRODUCTION

Introduction

Product name: Precision planetary gear box

Model: 16PGX138-30L-0-0-00MC (Example)

How to Work

Generally NGW type, fixed by tooth ring, sun wheel high speed input, planetary frame low speed output, according to a certain deceleration ratio, reduce the output speed and improve the output torque.

Application

Precision planetary gear box has the advantages of small size, high power density, large speed ratio range, coaxial arrangement of input and output, high efficiency, and is widely used in military, medical equipment, auto parts, small household appliances, smart home, solar energy, intelligent robots, precision instruments, automation equipment and other industries

Part Numbering

					Machining	MC
					Powder Metallurgy	PM
					Injection Mold	PL

PRODUCT FEATURES

High load carrying capacity

Each stage of transmission can be shared by multiple planetary gears, and compared with ordinary parallel shaft gear transmission, planetary gear boxes have higher load carrying capacity and durability

2 Compact construction

Input and output coaxial arrangement, small radial size, light weight, can achieve a large deceleration ratio in a limited space.

3 Smooth operation

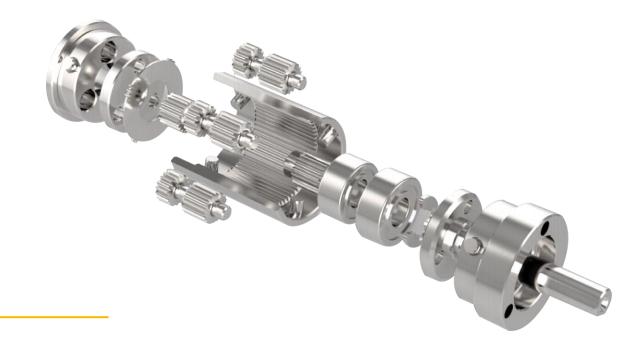

The multi-tooth meshing transmission of the planetary gear is more stable, with less vibration and noise.

4 High transmission efficiency

Take the 16 series gear box as an example, the primary transmission efficiency can reach 90%, the secondary can reach 80%, and the transmission efficiency is high.

PRODUCT STRUCTURE

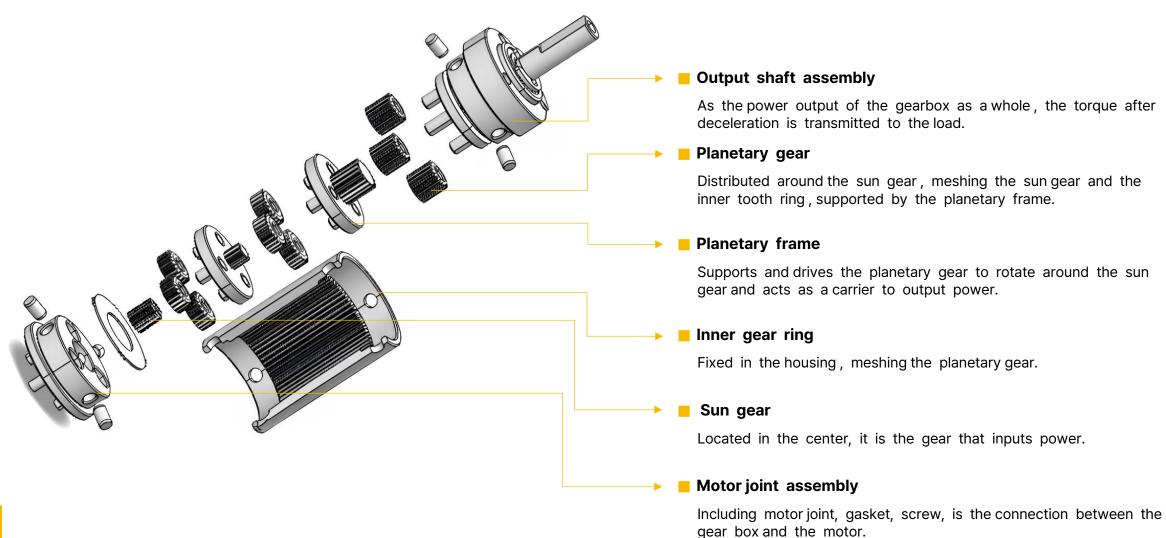

Product structure description

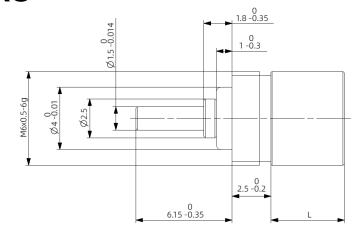

The input power is transmitted to the planetary gear through the sun and the planetary gear rotates around the sun gear under the drive of the planetary frame, while engaging with the fixed inner gear ring. Through this series gear meshing and rotating motion, according to a certain reduction ratio to achieve power distribution and deceleration, reduce the output end of the speed and the output end of the torque, and finally output to the output shaft.

PRODUCT STRUCTURE

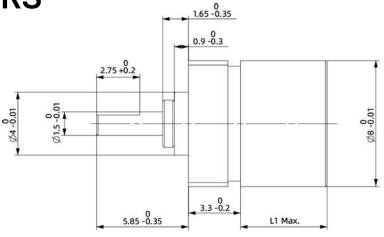

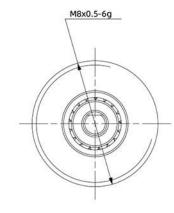

6PGX Φ6mm Series

Stage		Stage 1	Stage 2	Stage 3
Gear ratio	X:1	3.9	15	57
Max. backlash	0	1.8	2.0	2.2
Max. continuous output power	W	0.65	0.4	0.2
Max. peak output power	W	0.8	0.5	0.25
Max. continuous input speed	rpm	20000	20000	20000
Max. peak input speed	rpm	25000	25000	25000

PRODUCT MANUFACTURING

Use the gear measuring instrument of the same specification of the National Testing Center

Key parts are produced independently with imported equipment, with equipment investment of more than U\$4.3Mil

GF Machining Center

A machining center is an efficient and precise CNC machine tool that can process complex surfaces and precision parts.

It has advantages such as high precision, high speed, high flexibility and advanced automation.

GF adopts efficient vertical machining centers for large-sized cast iron structural components which can ensure good vibration absorption, high stability and high rigidity during continuous machining under large load-bearing conditions.

Backlash Detector

The computer-controlled gearbox backlash arc minute measuring bench is composed of a loading system, rotation system, spatial adjustment mechanism, FTS (Fault tolerance system) precision testing system, computer control display system, and clamping mechanism.

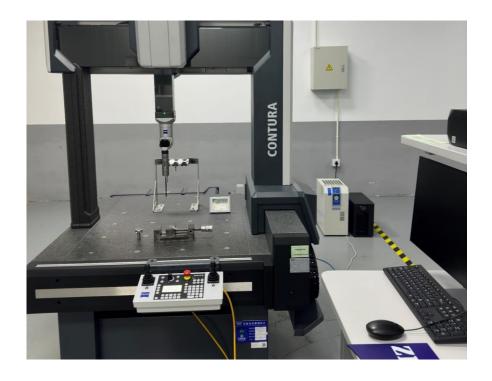

It is suitable for performance testing of planetary gearbox backlash includes forward and backward no-load repeated positioning detection, return clearance, backlash testing, backlash arc minute measuring and minimum starting torque detection.

Zeiss Coordinate Measuring Machine

It is a measuring instrument used in the fundamental disciplines of engineering and technical science as well as the field of mechanical engineering in order to measure the geometric dimensions of products includes diameter, distance, angle, shape, position dimensions and output coordinate values of measurement elements.

Gear Hobbing Machine

Capable of cutting straight and helical cylindrical gears as well as machining worm gears, sprockets etc.

A gear processing machine tool for machining spur, helical, herringbone cylindrical gears, and worm gears using a hob according to the generation method.

Klinberg Gear Measurement Center

It is an analytical instrument used in the fields of physics, engineering, technical science and mechanical engineering.

The measurement center can detect cylindrical gears, bevel gears, gear shapers and shavers, worm gears, rotors, hobs, broaches, rotational symmetric workpieces etc.

It can also be used for Fourier detection of new energy gears.

Broacher

A machine tool that uses a broach as a tool to process through holes, flat surfaces and formed surfaces of workpieces.

Broaching can achieve high dimensional accuracy and small surface roughness, high productivity and is suitable for mass production in batches.

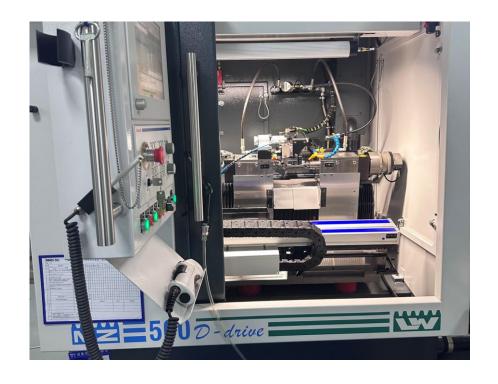

Small Module Gear Hobbing Machine

The Swiss Lambert Wahli small module gear hobbing machine 500D is a representative product of its company with excellent performance.

It is used for high-performance and high-precision small module gear machining, eight axis CNC and is used in the clock, instrument and micro machinery industries.

THANK YOU
